PERSONAL PROJECTS

Hospital Management system using HTML, CSS,
BOOTSTRAP, PHP

Hospital Management system using SQL

Women Safety System(Final year Project)

- There are variety of applications available for emergency managements in unsafe situations. Most of them just send the alert messages to the saved contacts. Our solution covers the maximum possibilities to send an alert with precise location of the victim along with the tracking. This system is implemented as android application paired with a smart watch. In case victim is unable to reach the phone the app running as the service in wearable will trigger the system and send the alert to all the trusted contacts and emergency management agencies. At the press of a button/some speech keyword/shaking the device the program will send a message to all of your emergency contacts. The program also sends an alert to emergency management agencies where central emergency control management system will be deployed.
